MIMIC

DATA RECOVERY IN THE PALM OF YOUR HAND

From our lab to yours, CPR Tools, Inc. is proud to introduce the latest innovation in data recovery technology. Designed for the lab and out in the field, use Mimic when size matters.

Time Saving Innovation

Mimic was built with you in mind. This product features the traditional **5-inch touchscreen** that you're used to, with **USB 3.0 and SATA ports** for faster reads and writes. You'll be in full control of your recoveries with the option to **start, pause, and resume** your work at any time with the touch of a button.

Mimic's recovery journals **automate processes** for logging operator information, source and destination data, and recovery statistics.

Recovering similar information? Create and **run your own scripts** on Mimic to make saving all of your music files, documents and more a breeze!

Make data recovery easy with Mimic. Built by and for information technology experts, this tool is sure to enhance your recovery technique. Mimic:

- supports multiple formats, including RAW and EWF, to guarantee software compatibility
- is a write-blocked device to ensure data integrity
- tracks recovery with convenient and seamless recovery action and information logging
- works with JumpStart technology to eliminate the hassle of time-consuming hard drive removal
- can create multiple copies with one-to-many cloning interface

Mimic's small size makes it portable enough to suit your needs. We didn't forget security, either. It comes equipped with a passcode locking feature to keep information private while operating a recovery.

Choose Your Function

Clone data quickly from a source device or partition to a destination device or partition.

File Copy specified files from a source file system directly to a destination drive folder.

Create an image of a source device in RAW, RAW compressed, .E01 and .Ex01 formats.

Mimic supports FAT, FAT16, FAT32, exFAT, NTFS, EXT2, EXT3, EXT4, HFS and HFS Plus file systems
