

For Immediate Release

June 2, 2017

Data Recovery and Security industry leaders form strategic business alliance.

CPR Tools, Inc. (Ft. Myers, FL, USA) proudly announces its strategic business alliance with Rusolut Sp. z.o.o. (Warsaw, Poland).

CPR Tools has been breaking new ground in data recovery and data security for almost 30 years and is known the world over as a technology innovator.

Rusolut is a new innovative project founded by an international team of experts with a vast background in Data Recovery, consisting of highly successful engineers, mathematicians and programmers from Russia and Europe.

“There’s no doubt that Rusolut’s expertise, especially in NAND Flash recovery methods, not only compliment but extend CPR Tools’ vast capabilities. For CPR Tools, being able to offer products and training from Rusolut in North American is a win-win for both companies.” said John Benkert, CPR Tools’ CEO.

“Rusolut’s tools and capabilities made the decision to partner with them a very natural and mutually beneficial choice. Their knowledge and innovations in NAND Flash is a healthy addition to our own suite of capabilities.” said Benkert.

CPR Tools hosts regularly scheduled training sessions featuring Rusolut’s Visual NAND Reconstructor. Limited class size and Rusolut’s expert instructors make this offering extremely valuable to anyone involved in data forensics with flash media.

For more information on Rusolut’s Visual NAND Reconstructor, visit <http://www.rusolut.com>. For more information on CPR Tools capabilities, products and services or to schedule training of any kind, visit <https://www.cprtools.com>
